SLOS068W -JUNE 1976-REVISED OCTOBER 2019

## **Industry-Standard Dual Operational Amplifiers**

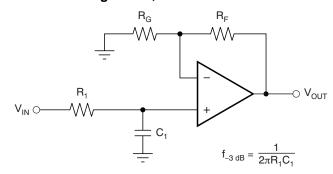

#### 1 Features

- Wide supply range of 3 V to 36 V (B version)
- Quiescent current: 300 μA per amplifier (B version, typical)
- Unity-gain bandwidth of 1.2 MHz (B version)
- Common-mode input voltage range includes ground, enabling direct sensing near ground
- Low input offset voltage of 3 mV at 25°C (A and B versions, maximum)
- Internal RF and EMI filter (B version)
- On products compliant to MIL-PRF-38535, all parameters are tested unless otherwise noted. On all other products, production processing does not necessarily include testing of all parameters.

## 2 Applications

- Merchant network and server power supply units
- Multi-function printers
- · Power supplies and mobile chargers
- Motor control: AC induction, brushed DC, brushless DC, high-voltage, low-voltage, permanent magnet, and stepper motor
- Desktop PC and motherboard
- · Indoor and outdoor air conditioners
- · Washers, dryers, and refrigerators
- AC inverters, string inverters, central inverters, and voltage frequency drives
- Uninterruptible power supplies
- Programmable logic controllers
- · Electronic point-of-sale systems

#### Single-Pole, Low-Pass Filter

# $\frac{V_{OUT}}{V_{IN}} = \left(1 + \frac{R_F}{R_G}\right) \left(\frac{1}{1 + sR_1C_1}\right)$

## 3 Description

The LM358B and LM2904B devices are the nextgeneration versions of the industry-standard operational amplifiers (op amps) LM358 and LM2904, which include two high-voltage (36-V) op amps. These devices provide outstanding value for costsensitive applications, with features including low offset (300 µV, typical), common-mode input range to ground, and high differential input voltage capability.

The LM358B and LM2904B op amps simplify circuit design with enhanced features such as unity-gain stability, lower offset voltage of 3 mV (maximum at room temperature), and lower quiescent current of 300 µA per amplifier (typical). High ESD (2 kV, HBM) and integrated EMI and RF filters enable the LM358B and LM2904B devices to be used in the most rugged, environmentally challenging applications.

The LM358B and LM2904B amplifiers are available in industry standard packages, including SOIC, TSSOP, and VSSOP.

## Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)					
LM358B, LM2904B, LM358, LM358A, LM2904, LM2904V, LM258, LM258A	SOIC (8)	4.90 mm × 3.90 mm					
LM358B <sup>(2)</sup> , LM2904B <sup>(2)</sup> , LM358, LM358A, LM2904, LM2490V	TSSOP (8)	3.00 mm × 4.40 mm

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision V (September 2018) to Revision W

•	Added specification in the Device Comparison Table	4
•	Changed CDM ESD rating for LM358B and LM2904B in ESD Ratings	6
•	Changed V <sub>S</sub> to V+ in Recommended Operating Conditions	<b>7</b>
•	Changed Thermal Information for the LM158FK and LM158JG devices	<b>7</b>
•	Added Typical Characteristics section for the LM358B and LM2490B op amps	14
•	Added test circuit for THD+N and small-signal step response, G = -1 in the <i>Parameter Measurement Information</i> section	
•	Changed the Functional Block Diagram	24
•	Deleted preview designator from LM358B and LM2904B in the Related Links section	29
CI	changes from Revision U (January 2017) to Revision V	Page
_		. 490
•		
•	Changed the data sheet title	1
	Changed the data sheet title	1
•	Changed the data sheet title	1 1
•	Changed the data sheet title	1 1 1
•	Changed the data sheet title  Changed first four items in the <i>Features</i> section  Changed the first item in the Applications section and added four new items  Changed voltage values in the first paragraph of the <i>Description</i> section	1 1 1 1
•	Changed the data sheet title  Changed first four items in the Features section  Changed the first item in the Applications section and added four new items  Changed voltage values in the first paragraph of the Description section  Changed text in the second paragraph of the Description section	1 1 1 1 1
•	Changed the data sheet title  Changed first four items in the Features section  Changed the first item in the Applications section and added four new items  Changed voltage values in the first paragraph of the Description section  Changed text in the second paragraph of the Description section  Added devices LM358B and LM2904B to data sheet  Changed the first three rows of the Device Information table and added a a cross-referenced note for PREVIEW-	1 1 1 1 1
•	Changed the data sheet title  Changed first four items in the Features section  Changed the first item in the Applications section and added four new items  Changed voltage values in the first paragraph of the Description section  Changed text in the second paragraph of the Description section.  Added devices LM358B and LM2904B to data sheet  Changed the first three rows of the Device Information table and added a a cross-referenced note for PREVIEW-status devices	1 1 1 1

SLOS068W - JUNE 1976-REVISED OCTOBER 2019

•	Changed all entries in the Absolute Maximum Ratings table except T <sub>J</sub> and T <sub>stg</sub>	6
•	Deleted lead temperature and case temperature from Absolute Maximum Ratings	6
•	Changed device listings and their voltage values in the ESD Ratings table	6
•	Changed "free-air temperature" to "ambient temperature" in the <i>Recommended Operating Conditions</i> condition statement	7
•	Changed table entries for all parameters in the Recommended Operating Conditions table	<mark>7</mark>
•	Added rows to the Thermal Information table, and a table note regarding device-package combinations	<mark>7</mark>
•	Deleted the Operating Conditions table	13
•	Added a condition statement to the <i>Typical Characteristics</i> section	21
•	Changed specific voltages to a Recommended Operating Conditions reference	
•	Changed unity-gain bandwidth from 0.7 MHz for all devices to 1.2 MHz for B-version devices	
•	Changed slew rate from.3 V/µs for all devices to 0.5 V/µs for B-version devices	
•	Changed the Input Common Mode Range section in multiple places throughout	
•	Changed V <sub>CC</sub> to V <sub>S</sub> in the <i>Application Information</i> section	
•	Subscripted the suffixes fro R <sub>I</sub> and R <sub>F</sub>	
	Changed Operational Amplifier Board Layout for Noninverting Configuration with an image that includes a dual op a	
		•
•	Added Preview designation to the LM358B and LM2904B devices in Table 1	29

		LM2904B, LM2904BA, LM2904, LM2904V	-40	125		
Operating virtual-junction temperature, T <sub>J</sub>				150	°C	
Storage temperature, T <sub>stg</sub>			-65	150	°C	

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### 7.2 ESD Ratings

			VALUE	UNIT						
LM358E	LM358B, LM358BA, LM2904B, AND LM2904BA									
V Florenstatic disablemen	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000								
$V_{(ESD)}$	Electrostatic discharge	Charged-device model (CDM), per JEDEC specification JESD22-C101 (2)	±1000	V						
LM158,	LM158, LM258, LM358, LM158, LM258A, LM358A, LM2904, AND LM2904V									
V <sub>(ESD)</sub> Electrostatic discharge	Floatroatatia diaabaraa	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±500							
	Electrostatic discharge	Charged-device model (CDM), per JEDEC specification JESD22-C101 (2)	±1000	V						

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

<sup>(2)</sup> Differential voltages are at IN+, with respect to IN-

<sup>3)</sup> Short circuits from outputs to V<sub>S</sub> can cause excessive heating and eventual destruction.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 7.3 Recommended Operating Conditions

over operating ambient temperature range (unless otherwise noted)

## 9 Detailed Description

#### 9.1 Overview

These devices consist of two independent, high-gain frequency-compensated operational amplifiers designed to operate from a single supply over a wide range of voltages. Operation from split supplies also is possible if the difference between the two supplies is within the supply voltage range specified in the *Recommended Operating Conditions* section, and V<sub>S</sub> is at least 1.5 V more positive than the input common-mode voltage. The low supply-current drain is independent of the magnitude of the supply voltage.

Applications include transducer amplifiers, dc amplification blocks, and all the conventional operational amplifier circuits that now can be implemented more easily in single-supply-voltage systems. For example, these devices can be operated directly from the standard 5-V supply used in digital systems and easily can provide the required interface electronics without additional ±5-V supplies.

#### 9.2 Functional Block Diagram - LM358B, LM358BA, LM2904B, LM2904BA

#### 9.3 Feature Description

#### 9.3.1 Unity-Gain Bandwidth

The unity-gain bandwidth is the frequency up to which an amplifier with a unity gain may be operated without greatly distorting the signal. These devices have a 1.2-MHz unity-gain bandwidth (B Version).

#### 9.3.2 Slew Rate

The slew rate is the rate at which an operational amplifier can change its output when there is a change on the input. These devices have a 0.5-V/µs slew rate (B Version).

## 9.3.3 Input Common Mode Range

The valid common mode range is from device ground to  $V_S - 1.5 \text{ V}$  ( $V_S - 2 \text{ V}$  across temperature). Inputs may exceed  $V_S$  up to the maximum  $V_S$  without device damage. At least one input must be in the valid input common-mode range for the output to be the correct phase. If both inputs exceed the valid range, then the output phase is undefined. If either input more than 0.3 V below V- then input current should be limited to 1 mA and the output phase is undefined.

#### 9.4 Device Functional Modes

These devices are powered on when the supply is connected. This device can be operated as a single-supply operational amplifier or dual-supply amplifier, depending on the application.

## 10 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

#### **10.1** Application Information

The LMx58 and LM2904 operational amplifiers are useful in a wide range of signal conditioning applications. Inputs can be powered before  $V_S$  for flexibility in multiple supply circuits.

## 10.2 Typical Application

A typical application for an operational amplifier is an inverting amplifier. This amplifier takes a positive voltage on the input, and makes it a negative voltage of the same magnitude. In the same manner, it also makes negative voltages positive.

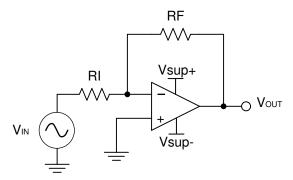

Figure 52. Application Schematic

#### 10.2.1 Design Requirements

The supply voltage must be chosen such that it is larger than the input voltage range and output range. For instance, this application scales a signal of  $\pm 0.5$  V to  $\pm 1.8$  V. Setting the supply at  $\pm 12$  V is sufficient to accommodate this application.

#### 10.2.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier using Equation 1 and Equation 2:

$$A_{V} = \frac{VOUT}{VIN}$$

$$A_{V} = \frac{1.8}{-0.5} = -3.6$$
(2)

Once the desired gain is determined, choose a value for  $R_I$  or  $R_F$ . [Subscripts should be fixed in the accompanying figures and equations also.] Choosing a value in the kilohm range is desirable because the amplifier circuit uses currents in the milliampere range. This ensures the part does not draw too much current. This example uses 10 k $\Omega$  for  $R_I$  which means 36 k $\Omega$  is used for  $R_F$ . This was determined by Equation 3.

$$A_{V} = -\frac{RF}{RI}$$
 (3)

## **Typical Application (continued)**

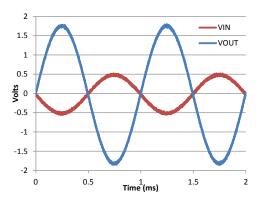

Figure 53. Input and Output Voltages of the Inverting Amplifier

## 11 Power Supply Recommendations

#### **CAUTION**

Supply voltages larger than specified in the recommended operating region can permanently damage the device (see the *Absolute Maximum Ratings*).

Place 0.1-µF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see the *Layout* section.

## 12 Layout

#### 12.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the
  operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low-impedance
  power sources local to the analog circuitry.
  - Connect low-ESR, 0.1-µF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for singlesupply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective
  methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes.
  A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital
  and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If
  it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as
  opposed to in parallel with the noisy trace. [Things in parallel never cross, by definition]
- Place the external components as close to the device as possible. Keeping R<sub>F</sub> and R<sub>G</sub> close to the inverting
  input minimizes parasitic capacitance, as shown in *Layout Examples*.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

## 13.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 13.4 Community Resources

TI E2E<sup>TM</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 13.5 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

#### 13.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 13.7 Glossary

SLYZ022 — TI Glossary.

This glossary lists and explains terms, acronyms and definitions.

## 14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most-current data available for the designated devices. This data is subject to change without notice and without revision of this document. For browser based versions of this data sheet, see the left-hand navigation pane.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

### **PACKAGE OPTION ADDENDUM**

27-Jan-2020

### OTHER QUALIFIED VERSIONS OF LM258A, LM2904, LM2904B:

Automotive: LM2904-Q1, LM2904B-Q1

• Enhanced Product: LM258A-EP, LM2904-EP

#### NOTE: Qualified Version Definitions:

- Automotive Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Enhanced Product Supports Defense, Aerospace and Medical Applications

### LEADLESS CERAMIC CHIP CARRIER

28 TERMINAL SHOWN

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. This package can be hermetically sealed with a metal lid.
- D. Falls within JEDEC MS-004

SMALL OUTLINE INTEGRATED CIRCUIT

- 1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- 2. This drawing is subject to change without notice.
- 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
- 4. This dimension does not include interlead flash.
- 5. Reference JEDEC registration MS-012, variation AA.

SMALL OUTLINE INTEGRATED CIRCUIT

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE INTEGRATED CIRCUIT

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

NOTES: A. All linear dimensions are in millimeters.

B. This drawing is subject to change without notice.

C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

# PS (R-PDSO-G8)

### PLASTIC SMALL OUTLINE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
- E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

### JG (R-GDIP-T8)

#### **CERAMIC DUAL-IN-LINE**

NOTES: A. All linear dimensions are in inches (millimeters).

- B. This drawing is subject to change without notice.
- C. This package can be hermetically sealed with a ceramic lid using glass frit.
- D. Index point is provided on cap for terminal identification.
- E. Falls within MIL STD 1835 GDIP1-T8

# P (R-PDIP-T8)

### PLASTIC DUAL-IN-LINE PACKAGE

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Falls within JEDEC MS-001 variation BA.

# DGK (S-PDSO-G8)

# PLASTIC SMALL-OUTLINE PACKAGE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
- E. Falls within JEDEC MO-187 variation AA, except interlead flash.

# DGK (S-PDSO-G8)

### PLASTIC SMALL OUTLINE PACKAGE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
- E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

SMALL OUTLINE PACKAGE

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
- 5. Reference JEDEC registration MO-153, variation AA.

SMALL OUTLINE PACKAGE

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE PACKAGE

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.
